algebrik

Finally, an LOS That Feels **Built for Symitar.**

Algebrik AI isn't just another lending platform—it's the first cloud-native, AI-powered LOS designed to work seamlessly with your Symitar Core through Jack Henry's VIP program. That means no clunky middleware, no integration nightmares, and no compromise on performance.

We've built Algebrik to do the heavy lifting—from borrower onboarding to underwriting, compliance, and instant disbursement—while staying in perfect sync with your Core in real time.
This is lending without the lag. Automation without the learning curve.
Finally, your team gets to focus on members—not manual work.

Effortless **Setup, Symitar-Ready**

Plug and Play with Symitar + Algebrik
Bi-directional, real-time read/write access to your core through SymXchange™.

Automate Smarter Decisions
Dynamic workflows + AI-based underwriting reduce manual effort

Personalize member Journeys
Boost conversions and reduce drop-offs with mobile-first design

What **Symitar® Integration Enables**

Real-Time Core Sync
Read/write access ensures instant updates to member data, balances, and loan status

Context-Aware Workflows
Tailor lending flows based on member data, product, or channel

AI-Powered Underwriting
Go beyond bureaus with cash flow analysis and dynamic rule engines

Faster Time to Close
Shrink approval cycles from days to minutes

No Middleware Required
Eliminate latency and friction—no nightly syncs, no duplicated data layers

Borrower-First Experience
Intuitive UI with guided flows reduces friction and improves NPS

Algebrik AI × Jack Henry

Symitar® Integration via SymXchange™

VIP CERTIFIED

Jack Henry Vendor Integration Program

algebrik.ai

VIP-certified. Seamlessly connected. The smartest lending platform now plays natively with Symitar.

What Is This Integration?

Jack Henry™ Symitar® is the core banking platform serving hundreds of credit unions across the U.S. As a member of Jack Henry's Vendor Integration Program (VIP), Algebrik AI has direct access to Jack Henry's technical resources and test systems - removing the credit union from the integration equation.

The integration is powered by SymXchange™ - a services-based programming interface that gives Algebrik direct access to Symitar's core data and business rules, with data integrity enforced through a managed service layer.

This is not middleware. It's a native, read/write connection to the core - enabling real-time member data, seamless loan booking, and instant disbursement.

VIP

Certified

Official Jack Henry Vendor Integration Program member — direct access, no middleware.

3+

Use Cases

Member lookup, loan booking for existing members, and new member + loan creation.

Read/Write

Core Access

Full SymXchange™ connectivity - data in, loans out, all in real time without duplicate entry.

How It Works

1. **Member Identified**

   SSN-based lookup via FindBySSN fetches the account number, then getNameSelectFields retrieves name, DOB, contact info, and address — all pre-filled, no manual entry.

2. **Application Processed**

   Algebrik AI handles underwriting, AI-driven decisioning, and document collection - leveraging core data for smarter, faster decisions including cash flow analysis beyond bureau checks.

3. **Loan Booked to Core**

   On funding, createLoan writes the loan directly to Symitar under the member's account. For joint applicants, createLoanName adds the co-borrower in the same flow.

4. **New Members Onboarded Instantly**

   For non-existing members, createAccount establishes the account in Symitar first, followed immediately by createLoan — no manual core-side setup required.

Core Integration Use Cases

Algebrik AI × Jack Henry Symitar® · Via SymXchange™ · algebrik.ai

Three native use cases - and the SymXchange™ API calls behind each one.

01 Data Pre-fill

Member Lookup via SSN

Fetch member data directly from Symitar using SSN, in two steps. First, FindBySSN retrieves the account number. Then getNameSelectFields (or getAccountSelectFields for full account details) pulls name, DOB, gender, email, phone, address, and Member Number.

All fields are pre-filled automatically in the Algebrik LO Portal and the online application journey, eliminating manual input and reducing errors at origination.

02 Single & Joint

Loan Booking — Existing Member

For existing members: FindBySSN retrieves the account number, then createLoan creates a new loan record directly under that account in Symitar - fully automated on funding approval.

For joint applicants, createLoanName is called after createLoan to attach the co-borrower to the loan. Both single and joint applicant structures are handled natively within the same origination flow.

03 Net New Members

New Member + Loan Creation

When an applicant is not an existing Symitar member, Algebrik handles the full onboarding flow. createAccount first establishes a new account record in the core, then createLoan immediately books the loan beneath it.

This end-to-end flow removes the need for any manual core-side setup before origination can proceed - cutting onboarding friction to zero.

algebrik

Algebrik- The World's first **cloud-native, AI-first digital-era Loan Origination Suite**

Algebrik AI is the world's first **cloud-native, AI-powered Loan Origination Suite (LOS)**, providing modern, scalable solutions for credit unions, auto lenders, banks, and lenders of all sizes. Headquartered in New York, we help lenders replace legacy systems with **seamless workflows, smarter decisioning, and faster approvals.**
